

EYELASH EXTENSIONS AFTER CARE

Please follow the guidelines below to help keep your eyelash extensions looking beautiful.

- Be gentle with your new lashes, refrain from touching or rubbing them.
- Avoid swimming, steam rooms, saunas, or extreme heat for 48 hours after application.
- Do not use an eyelash curler on the lash extensions or try to perm or tint them. This will break the bond on the extensions and might damage your natural lashes.
- Do not use oil-based products (oil-based eye makeup, makeup remover, moisturizer, cleanser, sunscreen) on or near your lashes.
- Use products of non-oily, non-creamy formulas to remove eye makeup. Oil-based makeup products will dissolve the adhesive on the eyelash extensions and will cause your extensions to fall out sooner than expected.
- Avoid rubbing your eyes roughly when cleaning your face and avoid running water directly on your lashes.
- Avoid sleeping face down to prevent pressing against your eyelashes.
- Be very careful when removing makeup in the eye area. Gently go over the eye area, sweep up and away from the lash extensions.
- Using mascara on eyelash extensions is not recommended. If you must wear mascara, only use water-based mascara.
- Keep an eyelash comb handy to straighten out any loose, stray lashes. Comb them carefully and very gently only when needed.
- Do not pull on any loose extensions or you risk plucking out your natural eyelashes. Do not attempt to remove the lash extensions yourself; allow the extensions to fall off naturally or schedule an appointment to have them professionally removed.
- Maintain your lash extensions with regular touch-up appointments, please schedule in advance as availability can be limited.
