

WHAT TO EXPECT

Permanent makeup will appear extremely intense and thick immediately after the procedure. The color will not even look right the first few days. Other factors are added to the permanent makeup pigment bottles to counteract the undertones of facial skin. Browns can look orangish-brown, blonde brows may look too yellow; lip colors are shocking! Some colors initially look too bright, and others look too dark. But don't worry - it changes. Excess pigment sheds off over the next 2-3 days, and then the skin starts healing over. A layer of healed skin on top of the pigment masks and tones it down considerably. As swelling goes down the lines will be thinner. On about the fourth day you are close to looking normal and no one notices anything. Colors will continue to soften over the next few weeks. It will look very natural in 1- 2 months.

- Treated area will flake
 - When applying ointment pigment will come off on the Q-tip
 - After the first procedure permanent makeup will appear to be thinner
- Everyone's body chemistry is different. Depending on anti-aging products used, sun exposure, smoking habits, prescription medication, skin texture, skin complexion, and or immune system some pigments may fade more than others. If your permanent makeup fades, lightens, and or is nonexistent please do not panic. You have a touchup and at this touchup modifications can be made to adjust the procedure to your situation. ****Please note: Permanent Makeup is at least a 2-step process. Therefore, loss of pigment is normal with some individuals.**
- If you are having a permanent lip color procedure and you have ever had a cold sore you may have another outbreak. It is important that if you are prone to cold sores that you take Valtrex at least 3 days before your appointment and another 3 days after. Keep in mind over 70% of the US is infected with the Cold Sore Virus so you may have the virus in your system and are unaware.
- Final healed result is at about 1-2 months. **I HAVE BEEN TOLD THAT UNDER NO CIRCUMSTANCE(S) WILL I BE ALLOWED TO GET A TOUCHUP BEFORE 1-2 MONTHS HAVE PASSED AFTER PROCEDURE.** If a touchup is needed, it is not done any sooner than 1 month after the first procedure. Performing a touchup too early could cause scarring and permanent damage to the treated area.

AFTER CARE

- Do not expose treated area to sun or a tanning booth, for 2 days.
- Absolutely no Neosporin, no cleansing creams, makeup, or chemicals may be applied to the pigmented, treated areas for the first 3 days.
- No hot, steamy, full pressure showers, saunas, excessive sweating, Jacuzzis, or swimming in chlorinated pools. These things can hinder the color bonding process.
- No Retin-A, bleaching creams, glycolic acids, fruit acids or AHA acids on the treated area.
- If crust appears on the procedure area, do not pick or peel the crust off because color will be removed along with the crust. Do not touch the procedure area with fingers as the fingers could transmit bacteria onto the area and lead to infection. This could ultimately incur some additional expenses to you.
- Don't sleep on a favorite pillowcase for the first 2 nights. Ointment and pigment can get on it.

Permanent Makeup
WHAT TO EXPECT/AFTER CARE / SKIN CARE REGIME

- After 7 days you may apply makeup.
- If you are a blood donor you cannot give blood for 1 year following your procedure (per American Red Cross.)
- Use sterile bandages and dressings when necessary.
- Keep the treated area moist for 7 full days following the procedure by continuing to apply, ONLY the aftercare that is provided regularly, during the day, with a Q-tip. Remember, the ointment acts as a “bandage” and keeps out dust, pollen and air. Clean area with cool water and mild antibacterial soap (Dial), and pat dry before reapplying ointment.

At the first sign of an infection, adverse reaction, or allergic reaction to the procedure, **I must notify Serenity Day Spa & Salon, Inc., a health care practitioner, and the Department of Health.**

Failure to follow post treatment instructions may cause loss of pigment, discoloration, or infection. Remember, colors appear brighter and more sharply defined immediately following the procedure. As the healing progresses, color will soften.

PLEASE FEEL FREE TO CALL IF YOU HAVE ANY FURTHER QUESTIONS AT 912-489-3883.

I understand that a touch up procedure is required. Touch up procedures are to be performed within 4-8 weeks of initial appointment. Cancellation of follow up’s must be done within 48 hours of procedure in order to not incur fees. If follow appointment is not cancelled, I become a no show, or I take my appointment after 8 weeks of initial procedure, I acknowledge that the follow up appointment is no longer considered “touch up,” and the initial treatment fee will be required at the time of procedure.
